

LED BOARD REPLACEMENT

CML-150/125 Wiring Diagram

02/14/2020 Rev 1A

Steps for Replacing the LED Board: Contact Collimare With Any Questions - (303) 278 1496

1. Remove the current board from the chassis by unscrewing the four screws that hold the LED backing plate posts to the blue spring plates.
2. Remove the 6 pin and 8 pin connectors from current board. These pull straight up. Do not unscrew the terminals holding the wires in place
3. Place the 6 pin and 8 pin connectors in the exact positions they were removed from onto the new board. Correct position matter.
4. Mount the new board back on chassis by reversing step 1. When re-mounting, press forward on the top of the board so it angles in slightly. This prevents the mounting screws from hitting the back of the housing.
